Mixed methods UX researcher with over five years in software, more than three of them in B2B SaaS across Thryv and Keap, two platforms small business owners use to run their companies. My strongest work is qualitative, moderating sessions and interpreting what people say and do, and I pair it with survey and benchmarking data so a finding arrives with both a number and a reason. I work end to end, from framing the question through to the readout, and I build the systems that outlast any single study, including the research operations function I stood up at Thryv: intake, taxonomy, templates and a shared knowledge base. I design research so the answer is allowed to come back negative, and I present the limits of my own data before anyone else has to.

EXPERIENCE

Thryv

January 2025 to November 2026

UX Researcher III · **Remote, following Thryv's acquisition of Keap**

- Established the research operations function from the ground up: standardized templates, a centralized knowledge sharing platform, an intake process for research requests, a prioritized research roadmap, and a global research taxonomy.
- Owned research end to end across 10 plus product areas of Thryv's SaaS platform for small businesses, from scoping and study design through fieldwork, synthesis and the delivery of findings stakeholders could act on.
- Used AI to hold that breadth, building automated workflows and custom AI skills that took over the repeatable parts of study setup, analysis and reporting so several projects could run in parallel.
- Partnered with design, product management, product marketing, engineering and customer service to align the research roadmap with product and business goals.
- Built the usability benchmarking program from nothing and ran it for three years across Keap and Thryv: 60 plus studies across 25 feature areas and all 7 product areas, every SUS score paired with task level completion, ease and confidence data. It produced the first proof that the redesigns worked, with 9 of 10 baseline to benchmark pairs improving, and I reported the one regression as prominently as the wins.

Keap, a Thryv product

July 2023 to January 2025

UX Researcher · **Remote**

- Owned research end to end for several product design teams on Keap, a SaaS CRM for small businesses, from scoping and study design through recruiting, moderating, analysis and readout, across both quantitative and qualitative methods.
- Chose methods against the decision in front of the team rather than defaulting to one, running moderated and unmoderated usability studies, interviews, surveys and benchmarking as the question required.
- Worked with product managers and designers to turn open product questions into studies that could answer them, and delivered findings as recommendations teams could act on, including the limits of what the data would support.

Google

February 2022 to March 2023

UX Research Assistant · **Seattle, WA, hybrid**

- Member of the AIUX team researching natural language and conversational applications of AI, embedded in a cross functional group of designers, engineers, product managers and conversation designers.
- Analyzed qualitative and quantitative study data, presented the key findings to the wider team, and co-authored a paper accepted at the ACM FAccT 2023 conference.

Itemize

August 2021 to February 2022

UX Research Lead • **Remote**

- Sole researcher at an early stage startup building a technology enabled lost and found service for universities.
- Ran market research, competitive analysis and stakeholder interviews to locate a defensible position in the category, and planned, recruited, moderated and analyzed interviews, usability studies and surveys.

EDUCATION

University of Washington

September 2014 to June 2019

Seattle, WA

Bachelor of Science, Human Centered Design and Engineering, Human Computer Interaction option

Trained in user research methods, usability study design, research planning and user experience design at the leading HCDE program in the country.

SKILLS

Qualitative	Affinity diagramming, Focus groups, Interviews, Observational studies, Participatory design, Qualitative analysis
Quantitative	Kano analysis, Quantitative analysis, Survey design and analysis, SUS benchmarking
Study design	A/B testing, Benchmarking programs, Card sorting, Competitive analysis, Kano studies, Mixed methods usability studies, Moderated usability studies, Participant recruitment, Research planning, Unmoderated usability studies
Design	Information architecture, Prototyping, Storyboarding, User journey mapping, Wireframing
Tools	Alchemer, Claude, Confluence, Google Analytics, Lucid, Miro, Qualtrics, SharePoint, User Interviews, UserTesting, Zoom
Languages	English, Korean
